Crisis Recovery to an Online Food Delivery Startup — QuickBite Express

Prepared by: Mrinal

Role: Business Analyst

Date: 03 Aug 2026

1. Business Problem Statement

QuickBite Express is a Bengaluru-based food-tech startup (founded in 2020) that connects customers with nearby restaurants and cloud kitchens. In June 2025,

QuickBite faced a major crisis. A viral social media incident involving food safety violations at partner restaurants, combined with a week-long delivery outage during the monsoon season, triggered massive customer backlash. Competitors capitalized with aggressive campaigns, worsening the situation.

2. Objectives

- Analyze customer behavior across the pre-crisis, crisis, and recovery phases.
- Identify customer segments with the highest potential for re-engagement.
- Evaluate order trends and revenue performance to measure business recovery.
- Assess delivery efficiency using delivery time, cancellation rates, and SLA compliance.
- Analyze customer ratings, reviews, and sentiment to understand trust and satisfaction levels.
- Evaluate restaurant performance and identify high-value partners for long-term retention.
- Recommend targeted marketing, operational, and partnership strategies that accelerate business recovery.
- Develop an interactive Power BI dashboard that enables leadership to monitor recovery KPIs and make informed business decisions.

3. Stakeholders

Stakeholder	Business Interest
CEO & Management	Monitor overall recovery and business growth
Operations Team	Improve delivery efficiency and reduce cancellations
Marketing Team	Rebuild customer trust and improve customer retention
Customer Experience Team	Improve customer satisfaction and ratings
Restaurant Partnership Team	Retain high-value restaurant partners and reduce partner churn
Data Analytics Team	Deliver insights, dashboards, and strategic recommendations

4. Business Requirements

Below are the core business needs identified through stakeholder discussions, prioritized using the MoSCoW technique.

ID	Business Requirement	Priority (MoSCoW)
BR-01	Monitor key KPIs (orders, revenue, AOV, cancellations, ratings, delivery	Must Have
BR-02	Compare performance across pre-crisis, crisis, and recovery phases.	Must Have
BR-03	Executive dashboard for strategic decision-making and recovery tracking.	Must Have
BR-04	Customer segmentation by behavior, location, and acquisition channel.	Should Have
BR-05	Restaurant performance analysis (orders, ratings, cuisine, partnership status).	Should Have
BR-06	Delivery partner performance (time, SLA, distance, cancellations).	Should Have
BR-07	Customer feedback and sentiment tracking.	Should Have
BR-08	Interactive filters (city, time, segment, restaurant, cuisine, channel).	Could Have

5. Assumptions & Open Questions

Assumptions

- The provided datasets are accurate, complete, and representative of business operations.
- Customer IDs, Order IDs, Restaurant IDs, and Delivery Partner IDs uniquely identify records across all tables.
- The datasets include sufficient historical data to compare pre-crisis, crisis, and recovery performance.
- Sentiment scores have already been calculated and are available for analysis.
- All timestamps follow a consistent date and time format.

Open Questions

- What are the exact date ranges defining the pre-crisis, crisis, and recovery phases?
- Is customer churn formally defined by the business (e.g., no orders within a specific period)?
- What SLA threshold determines an on-time delivery?
- Are cancellation reasons available or only cancellation status?
- Which KPIs will leadership prioritize during the recovery period?
- What is the expected reporting frequency for the dashboard (daily, weekly, or monthly)?

6. Scope

In Scope

- Analysis of customer behaviour and ordering patterns.
- Delivery performance analysis.
- Restaurant performance evaluation.
- Customer ratings and sentiment analysis.
- Strategic recommendations for business recovery.

Out of Scope

- Development of predictive machine learning models.
- Implementation of marketing campaigns.
- Operational system changes or application development.
- Financial forecasting beyond the available dataset.

7. Success Criteria

- Provides clear insights into customer, restaurant, and delivery performance following the crisis.
- Identifies actionable opportunities to improve customer retention and business recovery.
- Delivers an interactive dashboard that enables leadership to monitor critical recovery KPIs.
- Supports data-driven decision-making through accurate, easy-to-understand visualizations.
- Produces practical business recommendations that align with QuickBite Express's recovery objectives and can be used to guide future strategic initiatives.
